

# Discovery Medicine

*Medicine on the Leading Edge*

Volume 8, Number 43

December 2009

---

## Content Highlights

---

Promises and drawbacks of targeting cell cycle kinases in cancer	177
Screening for EGFR mutations in lung cancer	181
Therapeutic selectivity and the multi-mode drug target	185
Cognitive functioning in Tourette syndrome	191
Anticoagulation with Factor Xa and thrombin inhibitors: alternatives to warfarin?	196
Second and third line treatment in advanced NSCLC	204
Artificial antigen presenting cells for antigen-specific adoptive cell therapies	210
Blood-derived stem cells for treating type 1 diabetes	219
Programmed cell death and apoptosis in aging and life span regulation	223
Personalized medicine for NSCLC	227
Chronic tension-type headache	232
Platelet-derived microparticles in angiogenesis and tumor progression	237
Frontiers in platelet inhibition	242
Glycomimetic drugs - a new source of therapeutic opportunities	247
siRNA delivery for therapeutic RNA interference	253

## Personalized Medicine for Non-small Cell Lung Cancer

Pages 181 and 227
